

IN THE ABSTRACT OF THE DISCLOSURE:

Please amend the abstract to read as follows:

ABSTRACT OF THE DISCLOSURE:

A cooling system for a motor is prevented from exhibiting a thermal fatigue failure due to ~~the~~ a temperature cycle. The operation or ~~stop~~ stopping of the forced cooling motor fan 6 of the ~~forcible~~ forced cooling system is controlled using the difference between the temperature thereof and the operation start temperature  $T_{is}$  of the power converter 3, ~~thus.~~ Thus, expansion of the temperature range is suppressed.
